

How to Make a 4-Year Plan in EAB Navigate

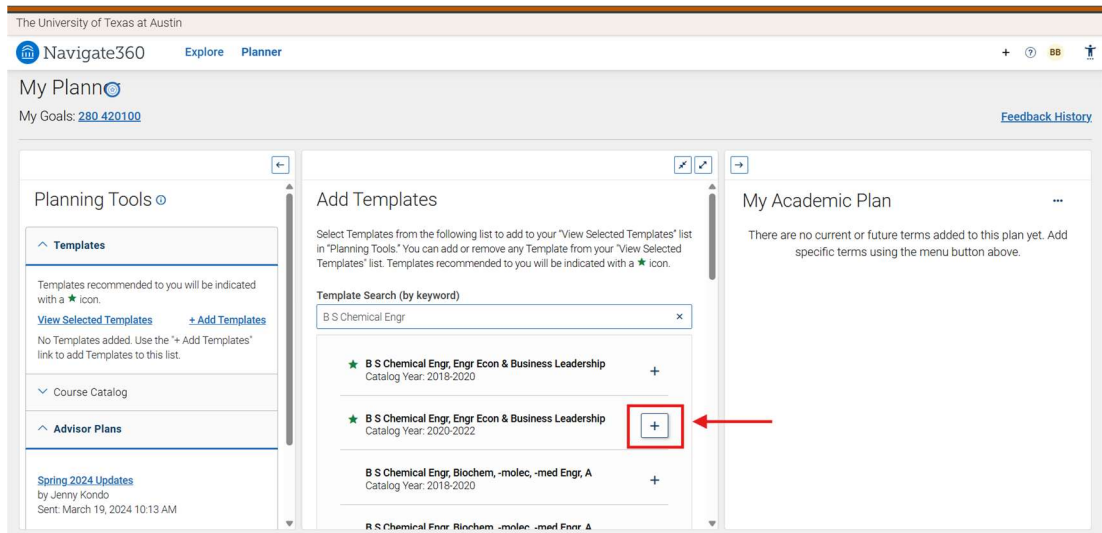

1. Log in to EAB Navigate (link in Canvas Homepage or [HERE](#))
 - a. Use your UT EID and Password to log in
2. Go to the “Planner” tab

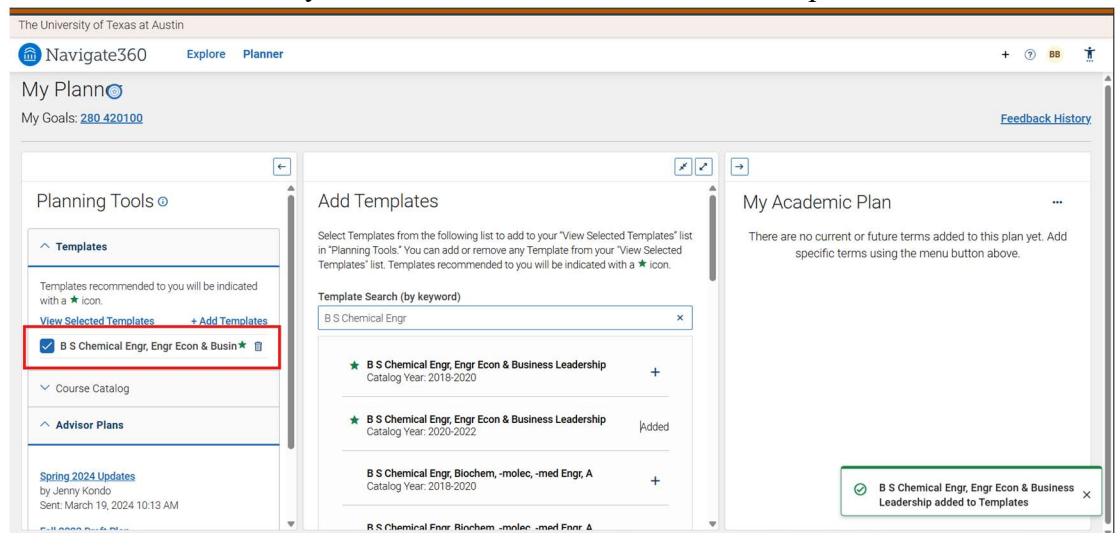

3. Click on “Templates” > “+ Add Templates”. Type “B S Chemical Engr” exactly into the search bar that will appear in the middle section of your screen and press enter. This will populate all the possible degree templates for chemical engineering as shown.

4. Select your template to add by clicking on the “+” icon on the right.
 - a. Any template will work for the purposes of 4-year planning
 - i. The only difference is the technical area which you do not have to choose until you have upper-division standing.
 - ii. The “Catalogue Year” refers to the time you are enrolling for classes and reflects changes in course requirements from previous years. Just pick the one that is closest to when you enrolled at UT.

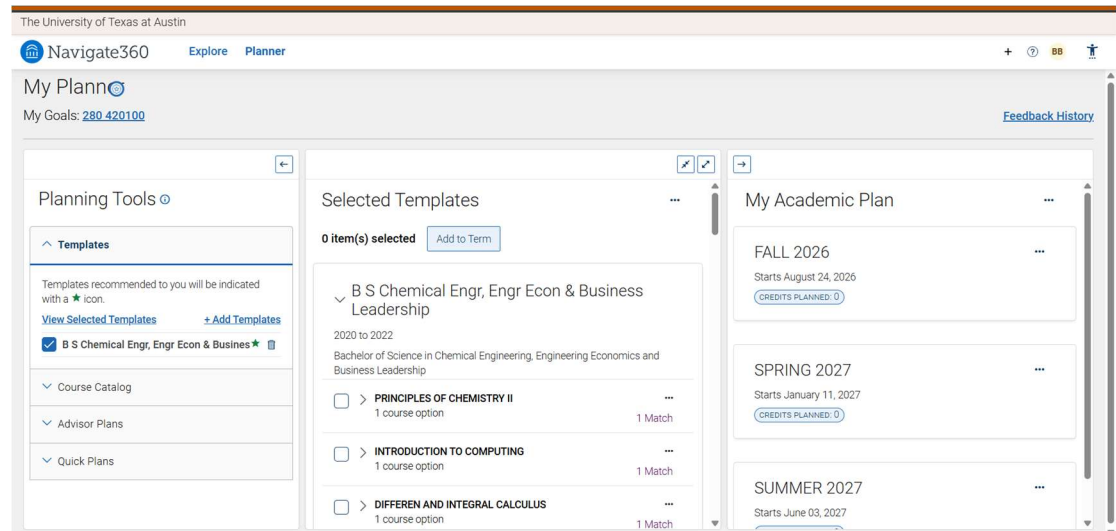

- b. Once you add the template, it will populate on the left and the blue checkmark should be there so that you can view the courses from that template.

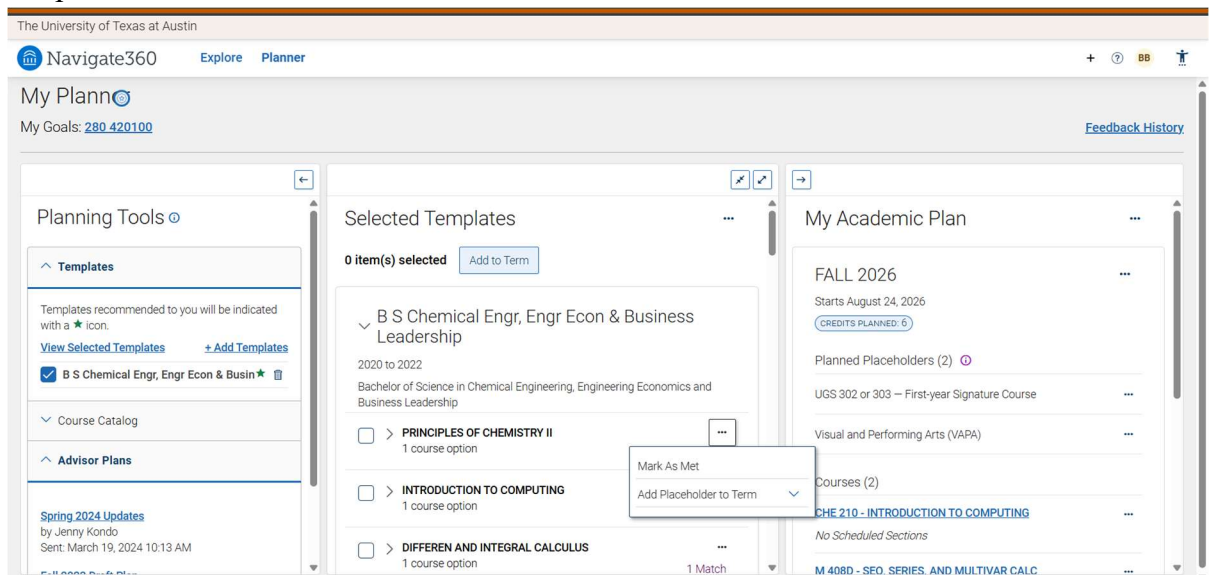

5. Make sure that your desired template is selected by verifying that the blue check mark on the left is there. Click on “View Selected Templates” and the courses will populate in the middle section.

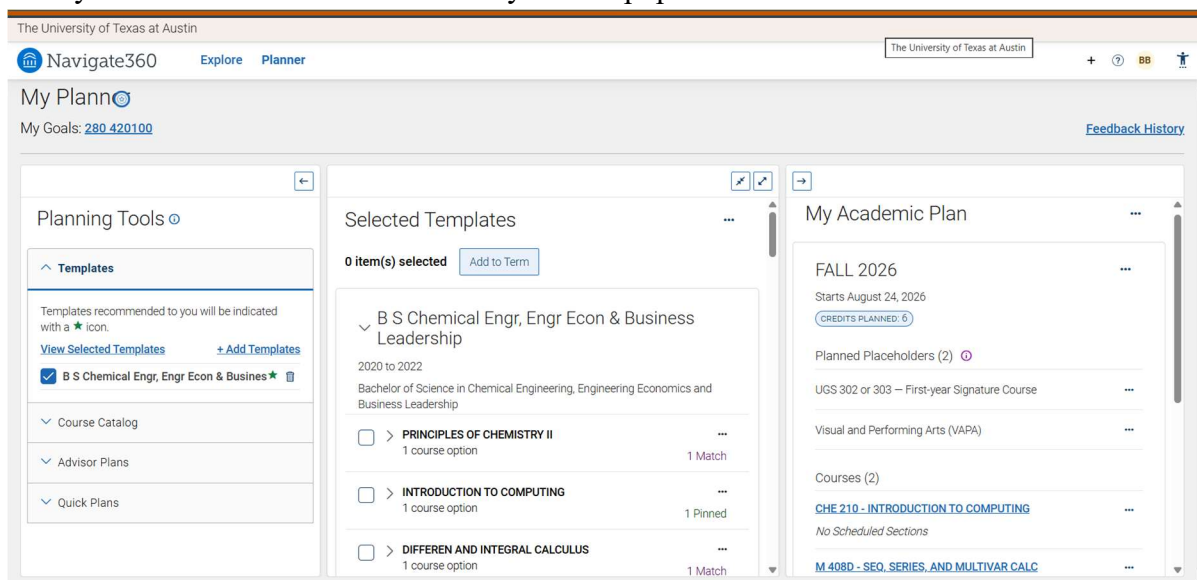

6. Before you start adding courses, you will need to add all of your semesters or “terms” through your planned graduation date.
 - a. Click the “...” on the upper right corner of the My Academic Plan tab on the right > “Add a Term” and select the semester you are planning for.
 - i. You will have to individually add all of them. If you are planning on taking courses over the summer, you can add summer terms too. For example, here, I have added terms through Summer 2027.

7. If you come in with AP/DC/IB or other forms of credit and do not need to include a course in your academic plan, click the “...” on the right of that specific course in the template and click “mark as met”.

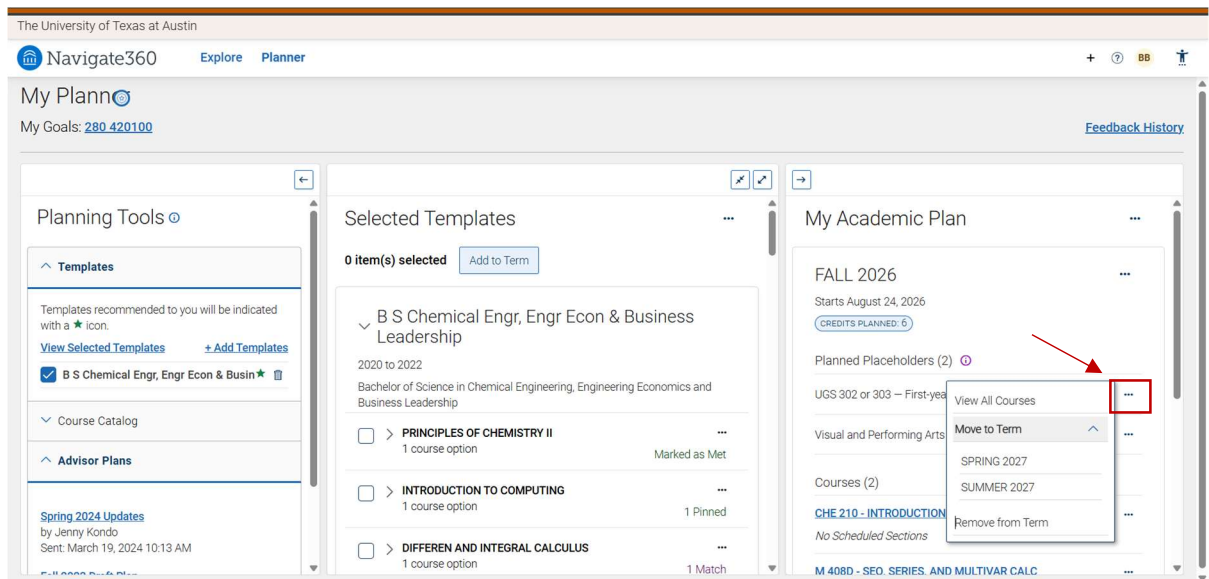

8. Find the courses you have planned for a term and select them by clicking the box on the left (it will turn blue with a check mark). For example, if you are planning to take CHE 210, M 408D, UGS 303, and your VAPA in Fall 2026, you will find those courses in the middle section and select them. Click on the blue “Add to Term” button and select the term you would like them to be in. They should populate as shown.

NOTE: When making your 4-year plan and adding courses like your UGS, VAPA, SBS, other university core categories, or technical/chemistry elective courses, you should not go and select a specific course – just click the box on the left. They will appear as “Planned Placeholders”. This is more useful information to your academic advisor in seeing that you have planned to get all your university core and CHE required electives.

- It is hard to tell what you are trying to do with just a course because it could be multiple things in some situations. For example, BCH 369 could be a chem elective or a tech elective.
- These hours will not show up in the “Credits Planned” count in the blue box so keep that in mind when organizing your terms to make sure you don’t overload a semester.

- If you would like to change the term that a course is in, click the “...” to the right of that course in the academic plan > “Move to Term” and then select the term you would like it to be moved into. You can also remove courses from a term.

To complete your 4-year plan requirement for registration, you will have to fill out all terms through your graduating semester AND satisfy the following:

- All degree requirements are fulfilled and all courses are accounted for.
- No pre-recs are violated (the Flow Chart in Canvas mentioned below is an excellent resource for this)

RESOURCES TO HELP IN ACADEMIC PLANNING

- Resources for successfully completing your 4-year plan (all in the CHE advising page on canvas in Modules > Registration Planning for Future Semesters)
 - 2026-2028 CHE suggested Arrangement of Courses
 - Flow Chart 2026-2028
 - Latest You Can Take Classes With Pre-Reqs
 - 4-HR CH Elective Handout
 - 2018-2026 Tech Electives
